5. Selected Measures in Detail

This section provides links to detailed descriptions of selected measures used in pilot reporting, including three postsecondary outcome measures and three K–12 measures that were linked to outcomes. For each measure, the descriptions provide the rationale for the measure; details on its definition, data sources, and related measures; and suggestions for how to use and present the measure. This documentation is intended for use by others who may want to develop high-quality, actionable, linked K–12 and postsecondary education data.

Postsecondary outcome measures include:

- Immediate postsecondary enrollment,
- Full-time postsecondary enrollment, and
- Participation in postsecondary remedial education.

K–12 measures include:

- Ever economically disadvantaged,
- Highest mathematics course taken in high school, and
- 9th-grade attendance.
